

## Irish Deconstructionism

Cardboard chest of drawers  
assembled without  
the plan and it worked

fine, well in a flimsy way.  
Then I decided that outward-  
facing tabs should toe in,

ideally. But in correcting,  
I found when tab A connected,

tab B popped out,  
vice versa & etc.

& oh well you know  
the whole middle class

cheapskate drill--  
& its tortures.

By this palsied time a rip  
manifested itself,  
minor, hardly showing.

Who could have said this  
infinitesimal flaw

would lead to frenzy,  
and the destruction of

the entire objet d'art  
into the smallest  
possible pieces?
